Near-Term Activities Should Include:

01

Analysis

Identify any inconsistencies between the WEIM RSE as modified by the Phase 2 enhancements and the EDAM RSE

02

Stakeholder Engagement

Build consensus on (a) purposes and objectives of RSE tests and (b) guiding principles for RSE formulation and evaluation

03

Review

On-going monitoring and analysis of failures

Defer Broad-Based Reform 1-2 Years Post-EDAM Implementation:

Time to gain experience with a new method for calculating load uncertainty

Time to gain experience with impact of Phase 2 enhancements

Time to gain experience with RSE performance under EDAM

In-Market Consequences Are Not Appropriate At This Time:

There appear to be potential errors in identification of failures. In-market consequences do not allow for analysis of failures or identification of errors prior to impact of consequences.

Lack of consistency/standardization in resource counting (e.g., demand response programs) could lead to inequitable and/or inefficient imposition of in-market consequences.
