# EIM Implementation Update

- SRP and SCL successfully activated in EIM on April 1. Both entities have since been running smoothly in the market.
- All five entities implementing in 2021 are on track. They are: BANC Phase 2, LADWP, NorthWestern Energy, PNM, TID
- Four entities going through the implementation process for 2022 are on track. These entities are: Avista, BPA, Tacoma Power & Tucson Electric Power
- Additional entities considered for 2022

## SRP and SCL activation in EIM on 4/1

- This was the smoothest EIM activation so far
- Both entities were well prepared and their personnel trained so they were passing all hourly tests from the start
- Transition was very stable and by early morning on 4/1 both entities started increasing ETSR limits and engaged in economic transfers with the rest of EIM footprint
- We did not have any issues with SRP and SCL IT systems
- On CAISO side we had a minor problem with some missing MSGs telemetry
  - It did not impact operation since we had a workaround in place until that problem was fixed
- We had some unplanned work in coordinating SRP and APS JOU scheduling and that was fixed quickly
